

Total Plate[®]
a TF Warren Company

HIGH DEFINITION PLASMA CUTTING, BEVELING, ROLLING AND FORMING

Total Plate Processing

The TF Warren Group's plate processing facility is located in Mobile, Alabama.

In addition to the industry leading blast and prime service currently offered by Blastech Mobile LLC, Total Plate's strategically located site can now provide enhanced cost savings associated with transportation and processing.

TF Warren Group is now able to offer a variety of different shop coatings, burning capabilities up to 2" thick, and rolled plates of all thicknesses up to 1.5" x 120" wide and 600" long.

Total Plate's custom-built facility has expanded to 40,000 sq. ft. and is equipped with high definition plasma compound beveling heads, an 83' dry downdraft table, and a sophisticated 4-roll plate rolling system with tilting in-feed and out-feed tables to ensure repeatable, accurate, and low cost part production. Total Plate has recognized the need to further service the tank industry by offering the ability to form parts associated with tank construction. A press brake has been added to provide a more complete package to our services. Total Plate can now offer the tank market fabrication of pontoons, bulkheads, inner/outer rims and windgirders, as well as any other parts that need forming.

We want to hear from you.
